Annual Inspection of State College Cadets, Old Armory and College Creamery in Background.

This pictorial bulletin gives a few photographic impressions of student life around the campus of the South Dakota State College. From it you will see that the varied interests and enterprises of the students, together with excellent facilities for practical laboratory work, combine to make college life exceedingly attractive and profitable. State College graduates make good because their training is practical and interesting. Prospective students are invited to write for special information relative to courses and the opportunities offered for training in their State College of Agriculture and Mechanic Arts.

THE STATE COLLEGE AS A PUBLIC SERVANT.

The South Dakota State College is the college of the State. The name is no misnomer. It is what it claims to be. It belongs to no party or no section. It is the college of all the people and of all the parts of South Dakota.

The legislature has given it a duty to perform. It has a certain mission to fill. To do what the people want—the State and the Nation have provided a faculty of about one hundred splendid men and women, all enthusiastic in their work and all anxious to do their part in helping accomplish the purpose of the State College.

The College has three distinct lines of work:

1. Original research and special investigations.
2. Scholastic teaching and general instruction.
3. Agricultural extension and farm and stock demonstrations.

The first of these important lines, research and investigation, is largely done at the college in our laboratories, horticultural rooms, green houses, orchards, experimental plots, dairy, breeding pens and stock barns. The work with soil and crops on the college farm is supplemented by scientific farming at the sub-stations at Highmore, Eureka, Cottonwood and Vivian.

All the collegiate, agricultural and special courses are given at the college.

The other important feature of the college is the general extension work. This is a variable field including explanations, illustrations, and demonstration for both the farm and home. Some of the special features of this department are meetings for farmers, home economic demonstration courses, dairy testing, stock examination, boys' and girls' clubs, women's clubs, soil examinations and analyses, seed collecting and testing, hog cholera treatment and general help for community centers.

The college is sparing neither time nor effort to help the people, especially in rural communities to make their farms more productive and their homes more attractive. The institution will gladly go to any community and help to give more efficiency to the farm and the home.

ELLWOOD CHAPPELL PERISHO, President.
